

2024 Product Range

Paintable wallcoverings

ERFURT is your strong partner for textured and smooth wallcoverings for customised colour design. The invention of woodchip wallcoverings by our great-great-grandfather Hugo Erfurt has shaped our company since 1864. At the same time, we have always explored new avenues and successively extended our product range: nonwoven woodchip, smooth and textured nonwoven, technical products and an energy-saving interior wall system. All our products must meet stringent quality standards, with priority being given to the needs of our customers and the usability of the product. As a pioneer in the sector, we actively promote an environmentally-friendly approach and we are constantly optimising our production and processes to become more sustainable. The healthy aspect of our products are just one result of this. Naturally, this product range has been produced using environmentally-friendly methods. We are thrilled to be the right partner for your wonderful wall design.

A sense of responsibility to protect human health and conserve the environment has formed an integral part of our company's philosophy for generations. As a family-owned company, it is in our very nature to think about the future.

Climate protection

ERFURT is guided by the 1.5 degree climate target of the Paris Agreement signed at the 2015 United Nations Climate Conference. We are continuously investing in our site and production to save energy.

Resource conservation

Our products are predominantly produced from sustainable resources. Recycled raw materials reduce the volume of waste we produce and our renewable raw materials, FSC®-certified wood fibres, come from responsibly managed forests.

Social sustainability

We are committed to social projects in our region. Our employees and customers are at the heart of everything we do. Our headquarters have been in Wuppertal since 1827 and we are investing in our long-term future.

You can be as flexible as you want to be with this ultra-simple design idea for your working-from-home desk area: simply match the height and width of the corner area to the dimensions of your furniture and adapt your choice of colour to your furnishings. This example shows how the wall design delineates the home office area, separating it from the rest of the room.

The 'Original'

ERFURT- Rauhfaser

Paintable woodchip wallcoverings
with an evenly textured surface

The 'Original': simple to use,
success every time

Eco-friendly and healthy

Free of PVC and plasticisers

Suitable for allergy-sufferers and
moisture-regulating

www.blauer-engel.de/uz35

Rauhfaser-woodchip wallcovering

Proven quality

Traditional ERFURT-Rauhfaser made of 100 % recycled paper is available in three qualities: Classico, Avantgarde and Sprint.

Even novices are guaranteed good wallpapering results with woodchip. And then you can really let your creative juices flow: your personal interior design starts once the woodchip has been applied – using paint or easy-to-apply effects to create walls to make you feel good in an instant.

The benefits at a glance:

- Eco-friendly and healthy
- Free of PVC and plasticisers
- Breathable and moisture-regulating
- Suitable for allergy-sufferers
- Can be re-painted several times

Strukturvlies Basic

LIGHTWEIGHT

**Printed nonwoven wallcovering
made of environmentally-friendly
nonwoven material**

Nonwoven made of 100 % recycled fibres
Water-based textured foam
Painting required
Smooth rear side for fast working

ERFURT-Strukturvlies Basic

The sustainable nonwoven wallcoverings, ERFURT-Strukturvlies Basic, consist of a nonwoven carrier material made exclusively from recycled fibres. The texture is achieved by applying a water-based textured foam. This makes ERFURT-Strukturvlies Basic wallcoverings veritably impressive, healthy products. Their smooth back means that they are also very easy to handle. We recommend applying a coat of paint to this range.

The benefits at a glance:

- 100 % recycled fibre nonwoven carrier material
- Water-based textured foam
- Painting required
- Smooth rear side for fast working
- Free of PVC and plasticisers
- Can be hung directly on the wall
- Can be re-painted several times

ERFURT- Variovlies

Lends a sophisticated look to walls

Permanently smooth walls

Easy to apply

Fine textures to combat the effects of
grazing light

ERFURT-Variovlies lends a sophisticated look to walls

The trend towards smooth walls

The trend in recent years has been to plaster and perhaps paint the walls of new buildings, refurbishments and renovations. No wallcovering was applied: the walls were left "bare"!

Persuasive product benefits

The use of flat nonwoven wallcoverings from the new ERFURT-Variovlies product range offers a perfect alternative to "bare" walls. Regardless of whether they are used as a perfect base surface for paint, as a wallcovering to cover cracks, for long-lasting smooth walls or as a finely textured surface for enhanced comfort in your own home. Variovlies improves the indoor climate and creates a look that is as smooth as a plastered wall. What is more, these breathable and moisture-regulating natural products are healthy wallcoverings, free of PVC and other substances that could be harmful to health.

Page 57
Use with:
ERFURT Paste

The benefits at a glance:

- Healthy and breathable
- Dimensionally stable and no soaking time
- Covers cracks (Crack class A)
- Can be re-painted several times
- Fewer seams, thanks to convenient width of 75 cm

The right solution for your smooth walls every time

Simple – fast – guaranteed success

ERFURT flat nonwoven wallcoverings could not be easier to use. The high-grade and tear-resistant flat nonwoven wallcoverings can be applied to all base surfaces suitable for wallpapering. Simply and efficiently apply them using the paste-the-wall technique.

Covers cracks – for lasting smooth walls without hair and spreading cracks

Walls and plaster expand and shrink. Especially in new buildings or with freshly applied surfaces. Stresses and cracks are the result. Do you want to avoid unattractive effects on the wall? You can now enjoy long-lasting smooth walls without visible cracks with the crack-covering qualities of Variovlies.

Easy to remove

Have you ever wondered how you could remove different paint coverings or textured plaster? It couldn't be simpler if paint or textured plaster is applied to ERFURT flat nonwoven wallcoverings and then simply removed in a single step together with the VARIOVLIES when you come to redecorate or renovate.

Wall with cracks

ERFURT- KlimaTec

Energy-saving

Fast heating up of cold rooms
Reflects and retains the warmth from the heating system
Quickly and efficiently creates comfortable warmth

Practical

Durable, flexible wallcovering
Covers cracks
Perfect base surface for wallpaper

Preventative

Prevents mould by raising the surface temperature of the wall
Breathable

KlimaTec – Feel good and save energy

Interior walls and ceilings to which ERFURT-KlimaTec has been applied, radiate thermal energy back into the room. The maximum heat is thus available to heat up the room air.

Rooms heat up noticeably faster and with lower energy consumption. The warm air is permanently retained within the room, as the thermal nonwoven acts as a dividing layer, separating the room from the cold walls.

The surface temperature of walls covered with KlimaTec increases by an average of 2 °C. The temperature in the room can therefore be lowered by at least 2 °C, without changing the comfort level in the space.

The benefits at a glance:

- Ensures that rooms heat up quickly
- Significantly reduces heating costs
- Breathable and moisture-regulating
- Prevents mould
- Covers cracks

Save with the ERFURT-KlimaTec product range!

1 tub of ERFURT-KlimaTec System Adhesive is sufficient for:
2 rolls of ERFURT-KlimaTec Thermovlies Premium thermal nonwoven or
3 rolls of ERFURT-KlimaTec Thermovlies Basic thermal nonwoven

Thermovlies Basic (1 mm)

This entry-level product is ideal for thermally neutral interior walls separating different rooms.

Thermovlies Premium (3 mm)

The Premium product stands out on account of its particularly effective use of thermal energy on walls and ceilings.

KlimaTec System Adhesive

Wallpaper and save energy

Applying ERFURT-KlimaTec Thermovlies thermal nonwoven to every wall surface creates an energy-saving base surface for pasting and wallpaper in a few easy steps.

We recommend applying ERFURT-KlimaTec Thermovlies Premium thermal nonwoven to every solid wall in a room and ERFURT-KlimaTec Basic to interior walls separating different rooms to achieve maximum energy savings.

ERFURT-KlimaTec Thermovlies thermal nonwoven wallcoverings can be applied to all solid smooth or textured base surfaces.

KlimaTec works best of all if you adhere to the 4 + 1 principle, that is to say applying KlimaTec Thermovlies thermal nonwoven to all solid walls and the ceiling.

Heat loss in
a detached home

Energy-saving

- Extremely fast heating up of cold rooms
- Reflects and retains the warmth from the heating system
- Quickly and efficiently creates comfortable warmth

Preventative

- Prevents mould by raising the surface temperature of the wall
- Breathable

Practical

- Durable, flexible wallcovering
- Covers cracks
- Perfect base surface for wallpaper

ERFURT- KlimaTec- RapidBoard

**The lightweight construction system
for a cosy and comfortable home**

- Easy to use
- Versatile
- Quick, simple and flexible to apply
- Healthy, environmentally-friendly, and comfortable

KlimaTec Rapid-Board is simple to fit – efficient to use

This ultra-lightweight board can be used indoors and outdoors, absorbs temperature-related structural movements, and is safe and easy to use. The integrated fibreglass webbing makes this unique environmentally-friendly and healthy construction board a veritable hard-wearing all-rounder.

The all-rounder: KlimaTec-RapidBoard

A lightweight construction board and complementary products for a wide range of applications.

Indoors

Use as dry walling, ceiling cladding, or for roof extensions ...

Wet rooms

Bathroom renovations, pre-walls concealing bathroom appliances, pre-walls on cool outside walls, basement walls

Outdoors

Car ports, sun rooms, sun houses, roof soffits, outdoor kitchens ...

We recommend a system-based approach:

- Use KlimaTec-RapidBoard System Adhesive RB 10 and apply to the entire surface of KlimaTec-RapidBoard for use on walls.
- Then use KlimaTec RapidBoard silicate filler to fill in the gaps. It provides the ideal base surface for subsequent wallpapering and painting work.
- And finally apply ERFURT's beautiful paintable and breathable wallcoverings to give your room a final touch.

*information on the level of emissions of volatile substances into indoor air associated with a risk of toxicity through inhalation, on a scale from A+ (very low emissions) to C (high emissions)

The comfort board

96 % of the KlimaTec-RapidBoard lightweight board is made of recycled waste glass (expanded glass granulate). It is very low-emission and breathable. It helps to generate a pleasant room climate, saving up to 11% heating energy by raising the wall surface temperature. At the same time, this helps to prevent mould.

Benefits at a glance:

- Lightweight
- Easy to use
- Versatile
- Prevents mould
- Increases the surface temperature
- Regulates air humidity
- Saves heating energy
- Particularly low-emission

Good protection against mould formation

Condensation is formed when high levels of air humidity encounter cold walls. This moisture quickly leads to mould formation.

ERFURT-KlimaTec RapidBoard combats mould in three ways:

- The surface temperature of the wall or ceiling is raised due to the low thermal conductivity of the material.
- The ERFURT system is breathable and can buffer water vapour, thereby regulating air humidity.
- ERFURT's RapidBoard, System Adhesive RB 10 and Silicate Filler are mineral-based and alkaline, and so do not form a breeding ground for mould.

KlimaTec-RapidBoard System Adhesive RB 10

For perfect adhesion of the KlimaTec RapidBoard

ERFURT-KlimaTec-RapidBoard System Adhesive is a mineral-based adhesive for the secure, full-surface adhesion of KlimaTec-RapidBoards.

Benefits at a glance:

- Easy to apply
- Excellent initial adhesion
- Good stability under load
- Breathable
- Capillary-active
- Reduced dust
- Prevents mould

More product information on our website:

Highly productive ✓

Very easy to adhere and fill ✓

Excellent sorption and moisture buffering properties ✓

KlimaTec-RapidBoard Silicate Filler

For a perfectly smooth wall surface

Using the ready-to-use mineral-based emulsion filler to perfectly prepare KlimaTec-RapidBoard lightweight construction boards for smooth finishing with fine plaster, paint or wallpaper.

Benefits at a glance:

- Simple smoothing of base surfaces (Surface quality Q3/Q4)
- For breathable wall structures
- Prevents mould
- Apply with a palette knife, roller or powerful airless spray gun

For indoor use only

ERFURT Accessories

Applying and repairing wallcoverings

- The right paste for woodchip, nonwoven woodchip and nonwoven wallpapers
- Woodchip Filler for minor repairs
- Seam Adhesive for touching up

ERFURT-Paste – handy for wallpapering

You've made the decision – the room is to be redecorated. You've already chosen your ERFURT wallcovering. Now you need to apply it to the wall. Not a problem with the right paste. ERFURT-pastes are designed specifically for the traditional method of hanging woodchip with a soaking time. They can also be used to hang nonwoven woodchip using the paste-the-wall technique, and efficiently hang nonwoven wallpapers – both flat and textured.

ERFURT-Paste – the right choice every time.

ERFURT-Repair Filler

...when there's a small blemish on the woodchip. ERFURT-Rauhfaser Filler rectifies it in an instant. It is designed for all textures to conceal drill holes, scratches and damage – use directly from the tube onto the wall.

ERFURT-Seam Adhesive

ERFURT-Seam Adhesive is perfect whenever the paste doesn't quite reach the wall when you're wallpapering. Or if the joins slightly lift up after painting.

Simply insert the nozzle under the loosened wallcovering or use a small brush or cotton bud to apply to small areas. Leave to absorb briefly, press down – and you're done.

ERFURT-PoS Displays

We offer a wide range of different display options, which can be combined to suit individual requirements, for optimum display of our products at the point of sale.

Examples:

1. The traditional row of pallets

It is generally used for fast-moving products, such as woodchip and nonwoven woodchip. It can be individually scaled up on the basis of Euro pallet dimensions, according to the size of your store. Product information conveyed on top panels and product-specific display boxes make the traditional row of pallets a total concept at any PoS.

Sell more with attractive product displays

2. Shop systems

Products are placed, generally horizontally, into compartments in different decorating stores. Painted sample panels with corresponding textures are attached to the front of each compartment. The shop systems are ideal for high-quality woodchip and nonwoven woodchip wallcoverings and also for high-quality wallpaper.

3. Customised solutions

Apart from the standard modules that ERFURT offers, it also supplies customised solutions developed in close consultation with the customer.

4. Promotional displays

An attractive PoS does not need to be permanent. Targeted campaigns with attractive PoS communication and individually designed boxes and labels attract attention and reach out to customers in your store.
